

HES-01 INSTRUCTION

Hose end sprayer (HES) can successful be used to dilute solutions with specific ratio/s. Solutions from the bottle will mix the water from the garden hose perfectly, different ratios can satisfy different needs of solution spraying.

Assembly Instructions

1. Check if all parts can be connected well: fan nozzle, ratio dial, connector, valve, suction pipe.
2. Fill bottle with nematode solution.
3. Screw the bottle tightly onto the ratio dial.
4. Connect the garden hose with the valve.
5. Choose the suitable ratio below. Use setting A to apply nematode solution.

Ø	A	B	C	D	E
Off	80:1	40:1	20:1	15:1	5:1
	1.5oz/gal	3oz/gal	6oz/gal	8oz/gal	24oz/gal

6. Turn on the tap.
7. Turn on the valve to apply nematode solution.
8. When bottle is empty, turn off the valve and then turn off the tap.
9. Refill the bottle with nematodes solution and repeat.

Trouble Shooting

1. Please confirm the connections are tight to avoid any leak.
2. Check screen at bottom of suction pipe for blockages, if so, clear away.
3. Set ratio dial at 0 to ensure water is flowing correctly.
4. Try other ratio settings.
5. Clean and empty bottle when not in use.
